

The 24 bioelectrical circuits

Our experience comes through the nervous system.

The **4** bioelectrical *centres*, provide electricity to the **4 bases** in the DNA of every cell in our body.

In each strand of DNA there are **24 chromosomes**¹.

The **24** bioelectrical *circuits* connect the brain with every cell via the **24 chromosomes**.

The signal from a *circuit* goes to one of the **24** vertebrae in the spine.

The signal is transmitted to the brain via the spinal chord.

In the brain this electrical signal causes a *biochemical* reaction.

It takes 1/3 of a second for this reaction to be experienced.

Our experience is in the past because we can sense 1/100th of a second.

Superimposed on our experience is the effect of the bioelectrical signal from the PULSE of the earth.

This bioelectrical signal is here referred to as the **EARTHSONG**.

Depending on the state of our nervous system the effect is either positive or negative.

1. The number of 24 chromosomes was only scientifically established at end of the 2nd Millennium. Its discovery is opening up a new age in medical and biological science.

There are 22 pairs of autosomes (Male/Female) and 2 single celled chromosomes, an X and a Y.

Women have 2 X's and Men have an X and a Y chromosome.

This scientific result of 24 confirms that the ancient knowledge underlying Sw. Dheeraj's Tibetan Pulsing system of 24 bioelectrical circuits is valid. Furthermore there are also 2 organs that are different in the male and female body. It is likely that the sexual circuits connect via the X and Y chromosomes. Those circuits are the Testes/Ovaries and the Penis/Vagina. It should be noted that most scientist still refer to 23 chromosomes because they lump the X and Y together.

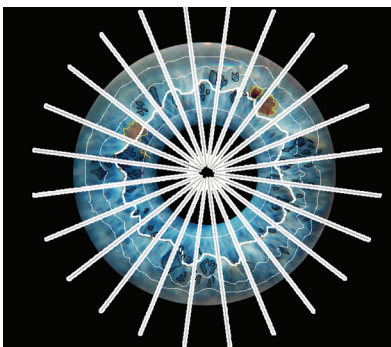

Our Eyes show the state of the nervous system.

The LEFT side of the Brain looks through the RIGHT eye and connects to the DC centre of the **Hara**. ■

The RIGHT side of the Brain looks through the LEFT eye and works with the EM centre of the **Heart**. ●

The **RIGHT** eye is **active (male)** and sees the **vertical**

The **LEFT** eye is **receptive (female)** and sees the **horizontal**.

The eye's circuits are read by dividing the eye into 24 equal wedges of 15 degrees.

To interpret the right eye we use the template below. It is a bioelectronic map of the right eye with the organs, the vertebrae, the sound and the colors. This is the RIGHT EYE TEMPLATE. It is a map of the male part of our consciousness.
