

The body points. THROAT KEY

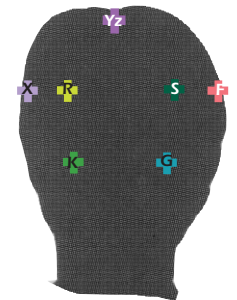

Each bioelectrical circuit can be contacted in 6 places in the body. 4 points for the centres, 1 in the throat, and a vertebra. These are the points used in Tibetan Pulsing Healing. There is a pulse beat in these places which has the frequency of the circuit and when touched activates the brain. By touching 2 points in a circuit the brain opens an electrical connection. Holding points in a circuit for some period (10 to 20 mins) allows negative electrical charge to be dissipated and areas of no feeling to regenerate.

The relative location of each point on the different parts of the body for the 4 centres is the same. The key for this is the throat where all the circuits pass through. Dheeraj developed the key shown to the left and below based on an ancient Sufi diagram. The Unison points shown to the right, on the top and back of the skull show the same spatial relationship.

BACK OF SKULL

The 6 waves each with 4 pillars of consciousness

There are 6 WAVES of 4 circuits adjacent to each other. These are known as the Greens, the Reds, the Blues, the Yellows, the Sparkles and the Violets. Points in the first 4 waves are on the front of our bodies and the Greens are on the back of the body while the Violets are in the centre and the sides. The points are the same for both a man and a woman. Each wave deals with a major division of our consciousness. The waves follow the order shown below in the BARDO of life¹.
